

Salesforce

Ape

A Platform to build MCP-based Agents
for Agentic API Automation

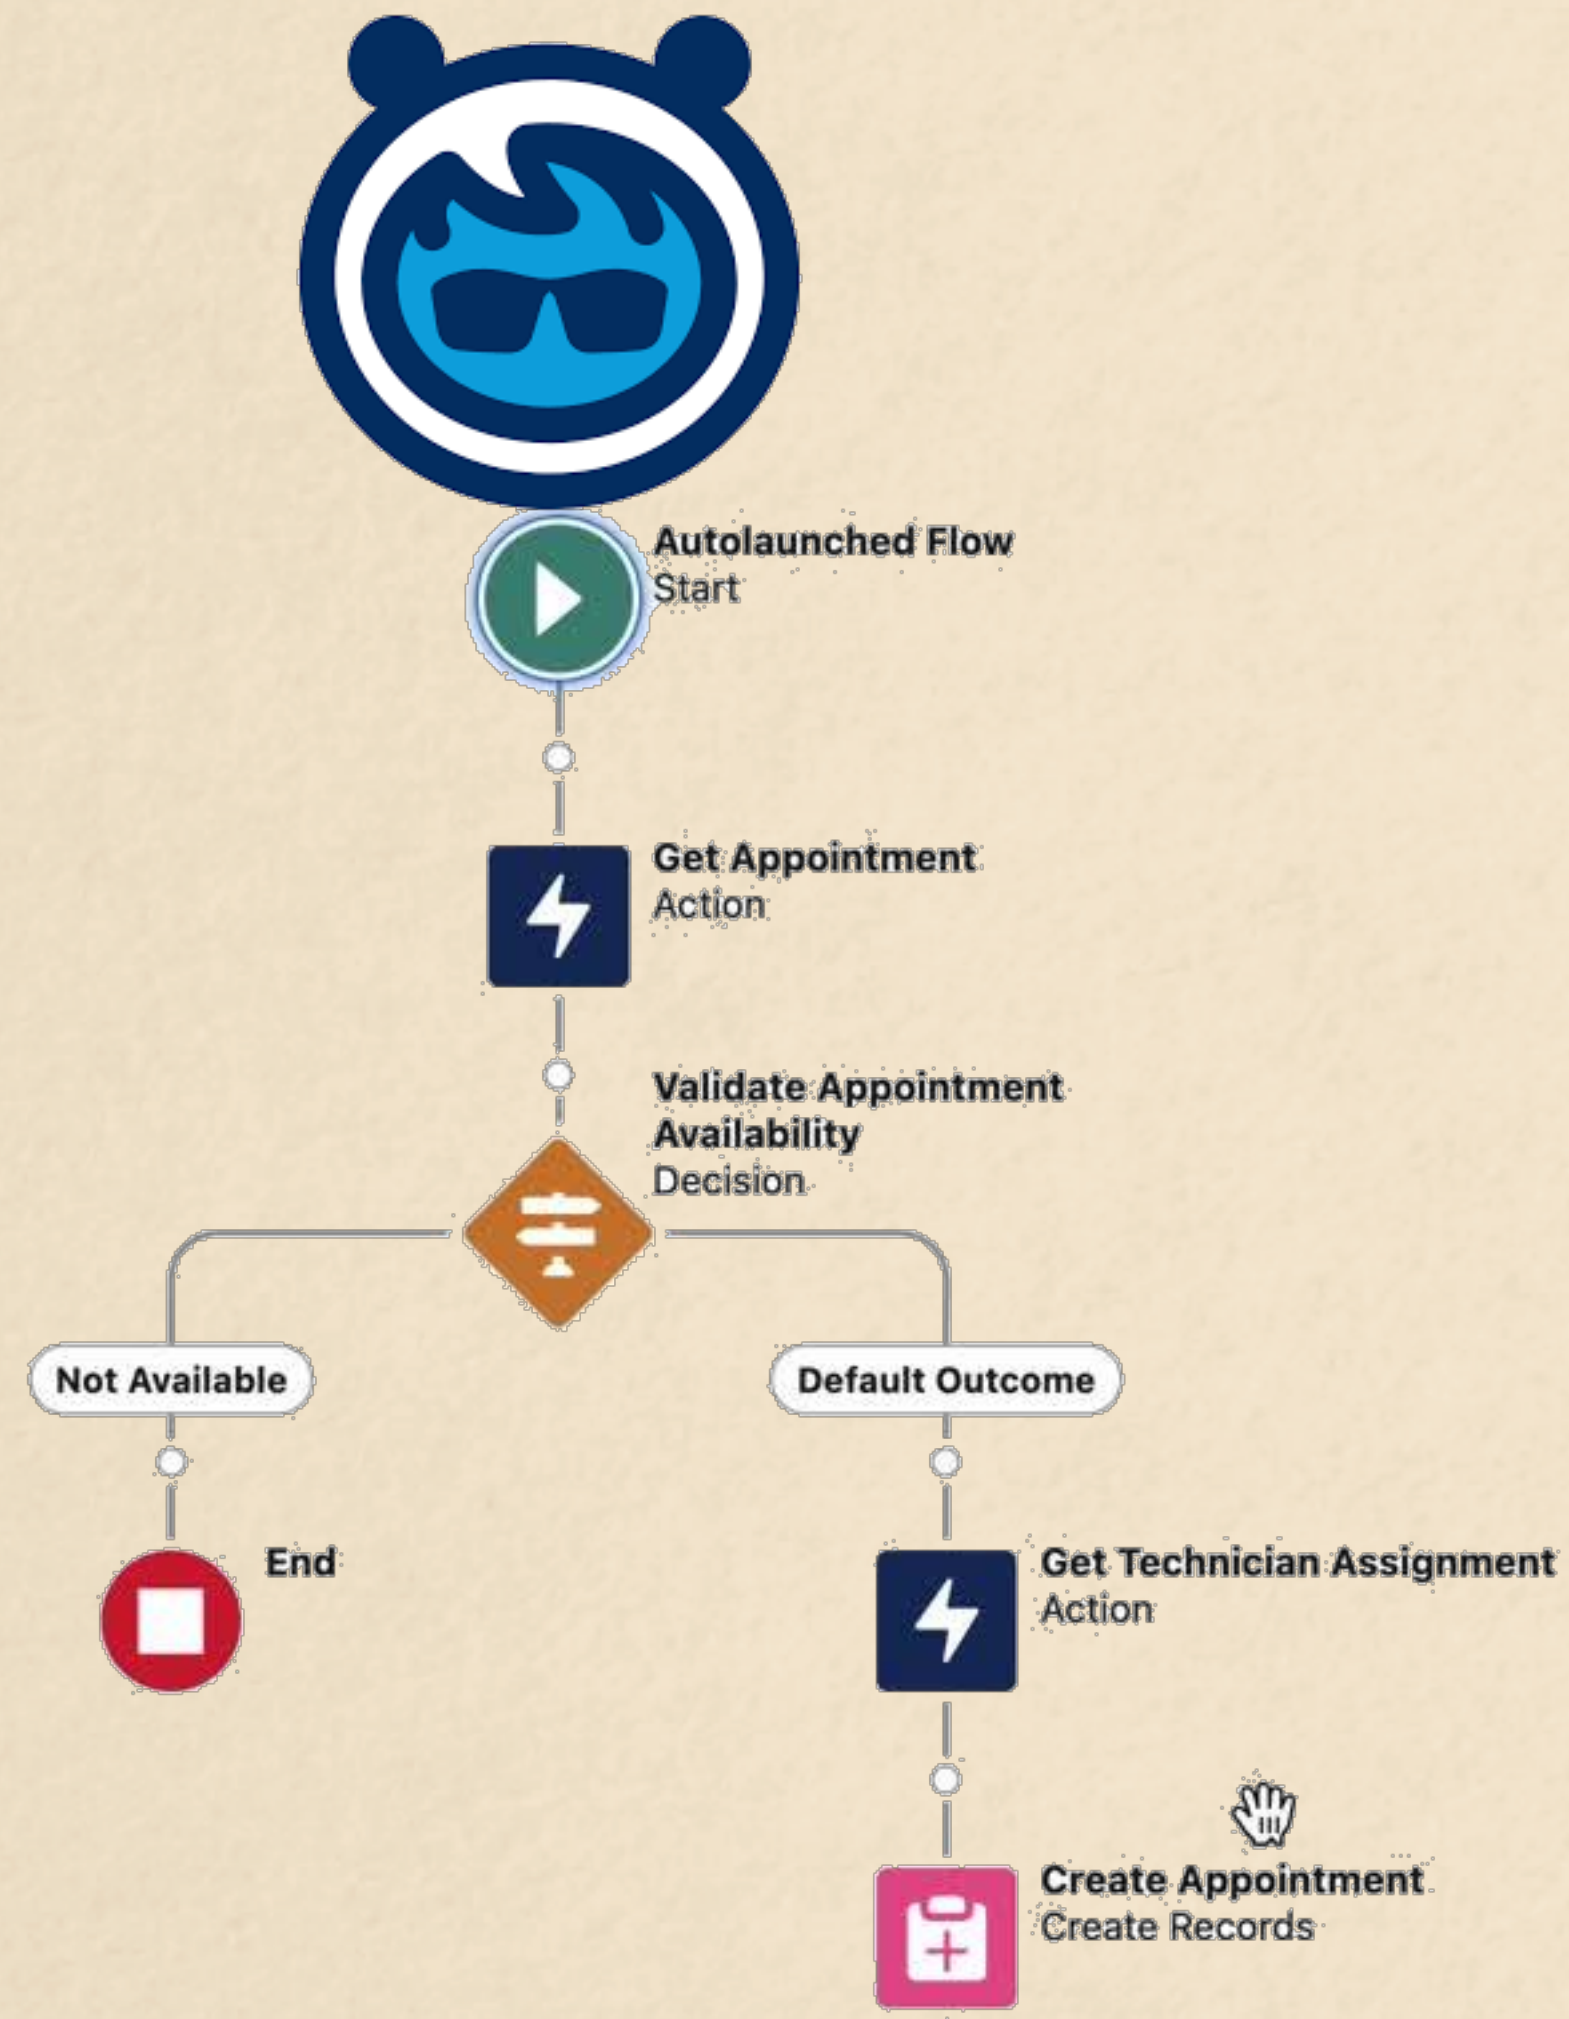

The Problem

- Scattered Google Sheets or Quip documents as Runbooks is a challenge to conduct exercises like E2E Blitz
- Customers, Salesforce developers struggle with Static Developer documents to piece together information E2E
- No API playground to understand API intricacies

API first
to
Agent first

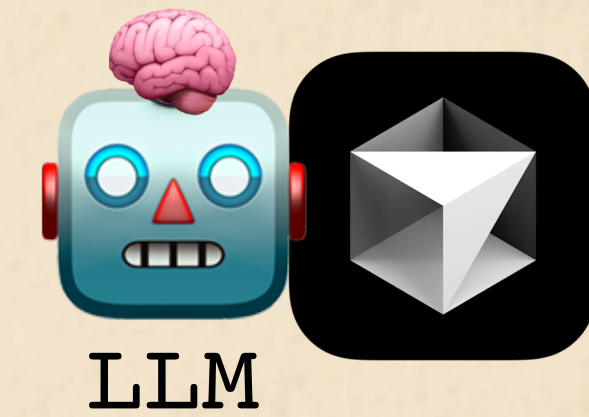

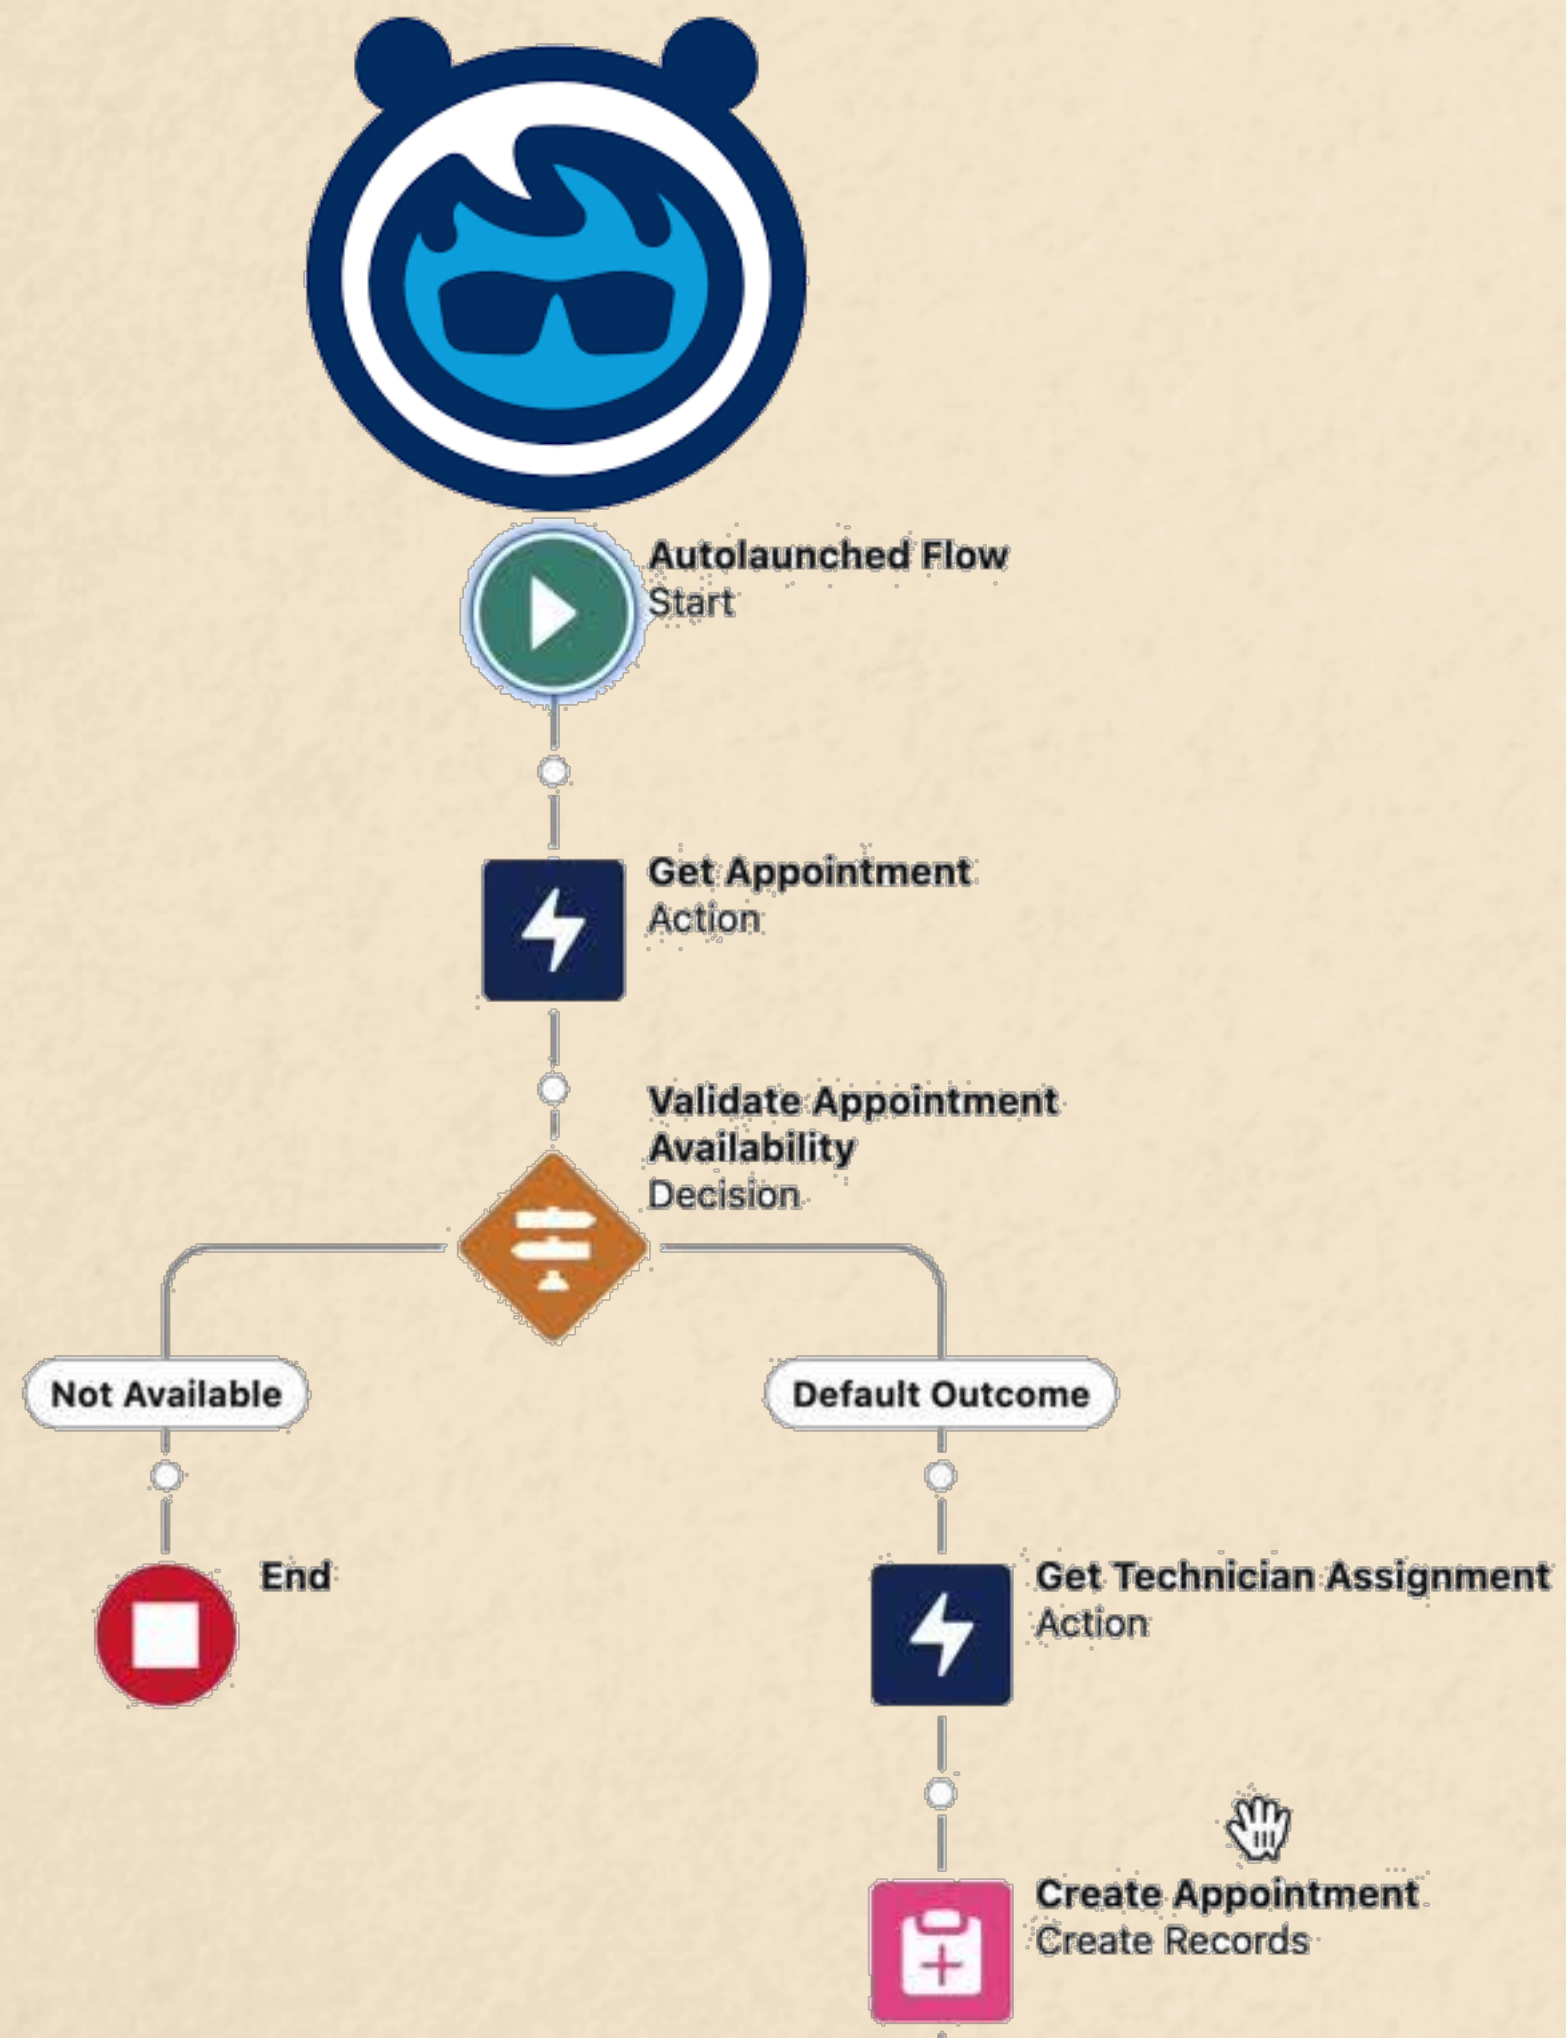

Why not use Flow-based Agentforce Agents?

- Maintenance overhead of a new Flow
- Not all Connect APIs are flow-compatible
- Flow is not intuitive for collaboration
- Troubleshooting may be hard as the flow grows in size

A Novel Approach

salesforce

+

+

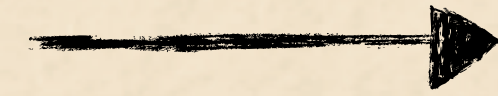

+

+

Any free LLM like and MCP client

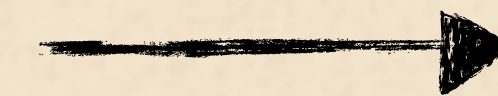

- Claude Desktop (LLM + MCP Client)
- Claude / Gemini + Cursor (MCP Client)

(Free & Open-source)

The Model Context Protocol

(No Maintenance Overhead)

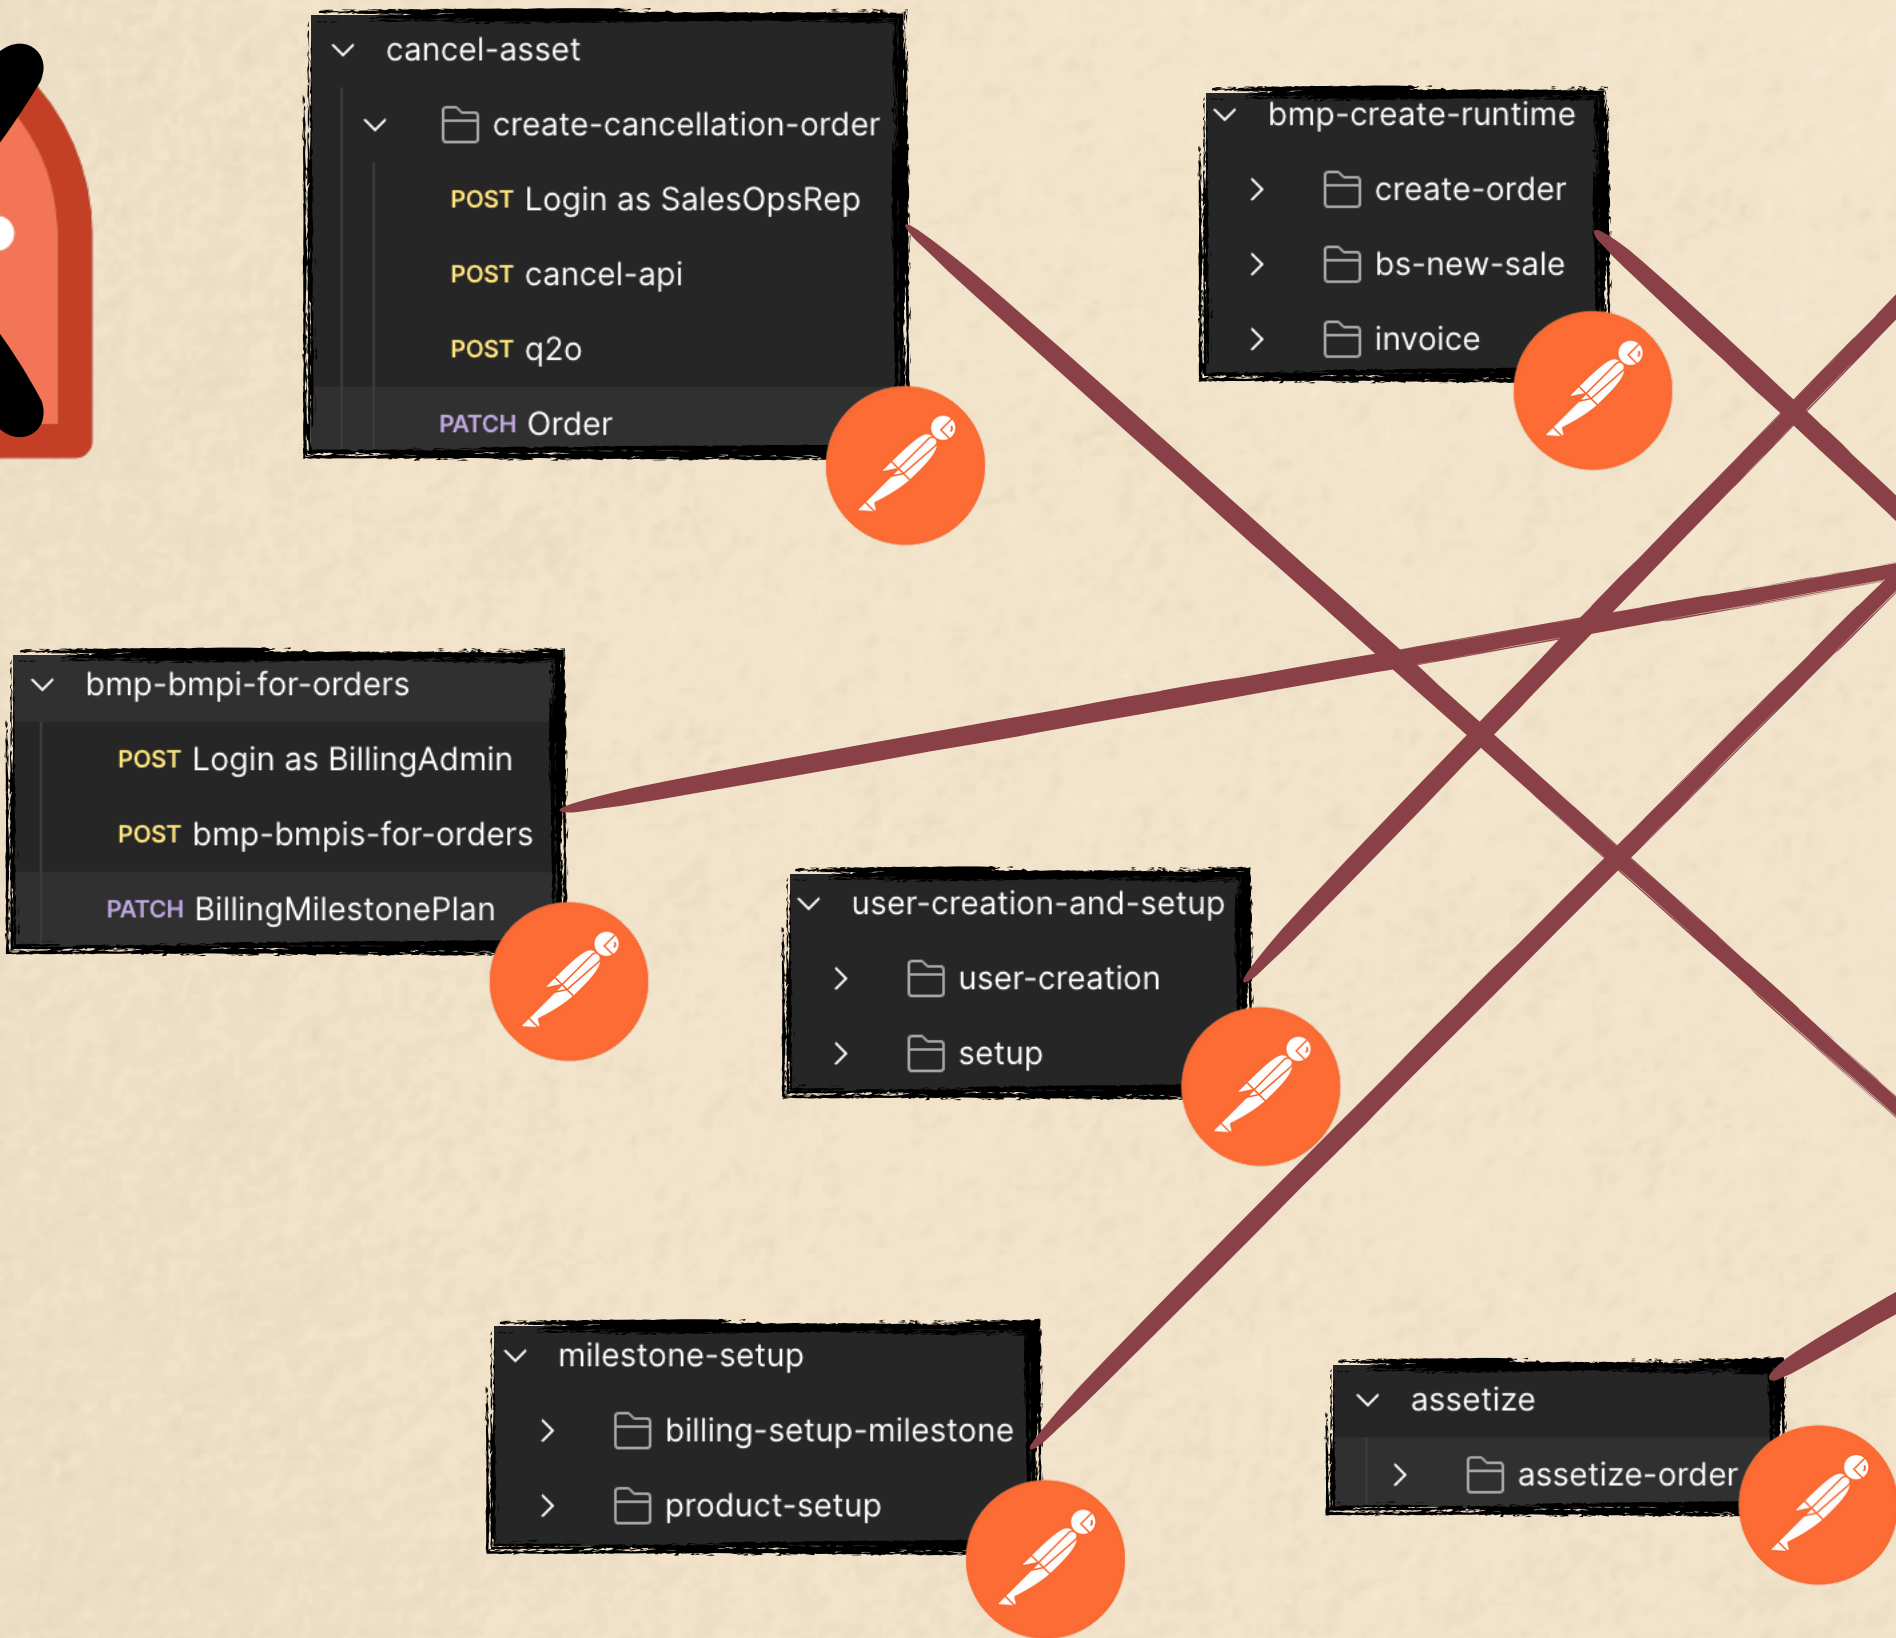

- Postman collections contain API relationships
- ReVoman is a JVM native Postman collection execution engine that can be used with MCP tools written in JVM (Java/Kotlin)

Why no Maintenance Overhead?

- ReVoman is used to write Low-code Persona-based FTests using Postman Collections
- Postman Collections hooked to Automation via FTests
- TF Yoda makes sure they are always in sync with the API contract

FTest as Live Runbook

```
void testMilestoneBillingE2E {  
    final var personaCreationAndSetupRundown =  
        ReVoman.revUp(PERSONA_CREATION_AND_SETUP_CONFIG);  
    ...  
    ...  
    ...  
    final var milestoneSetupRundown =  
        ReVoman.revUp(MILESTONE_SETUP_CONFIG);  
    ...  
    ...  
    final var bmpBMPIsForOrder =  
        ReVoman.revUp(BMP_BMPIS_FOR_ORDER_CONFIG);  
    ...  
    ...  
    final var bmpCreateRunTimeRundown =  
        ReVoman.revUp(BMP_CREATE_RUNTIME_CONFIG);  
    ...  
    ...  
    final var assetizeRundown =  
        ReVoman.revUp(ASSETIZE_CONFIG);  
    ...  
    ...  
    final var cancelAssetRundown =  
        ReVoman.revUp(CANCEL_ASSET_CONFIG);  
    ...  
    ...  
    ...  
}
```

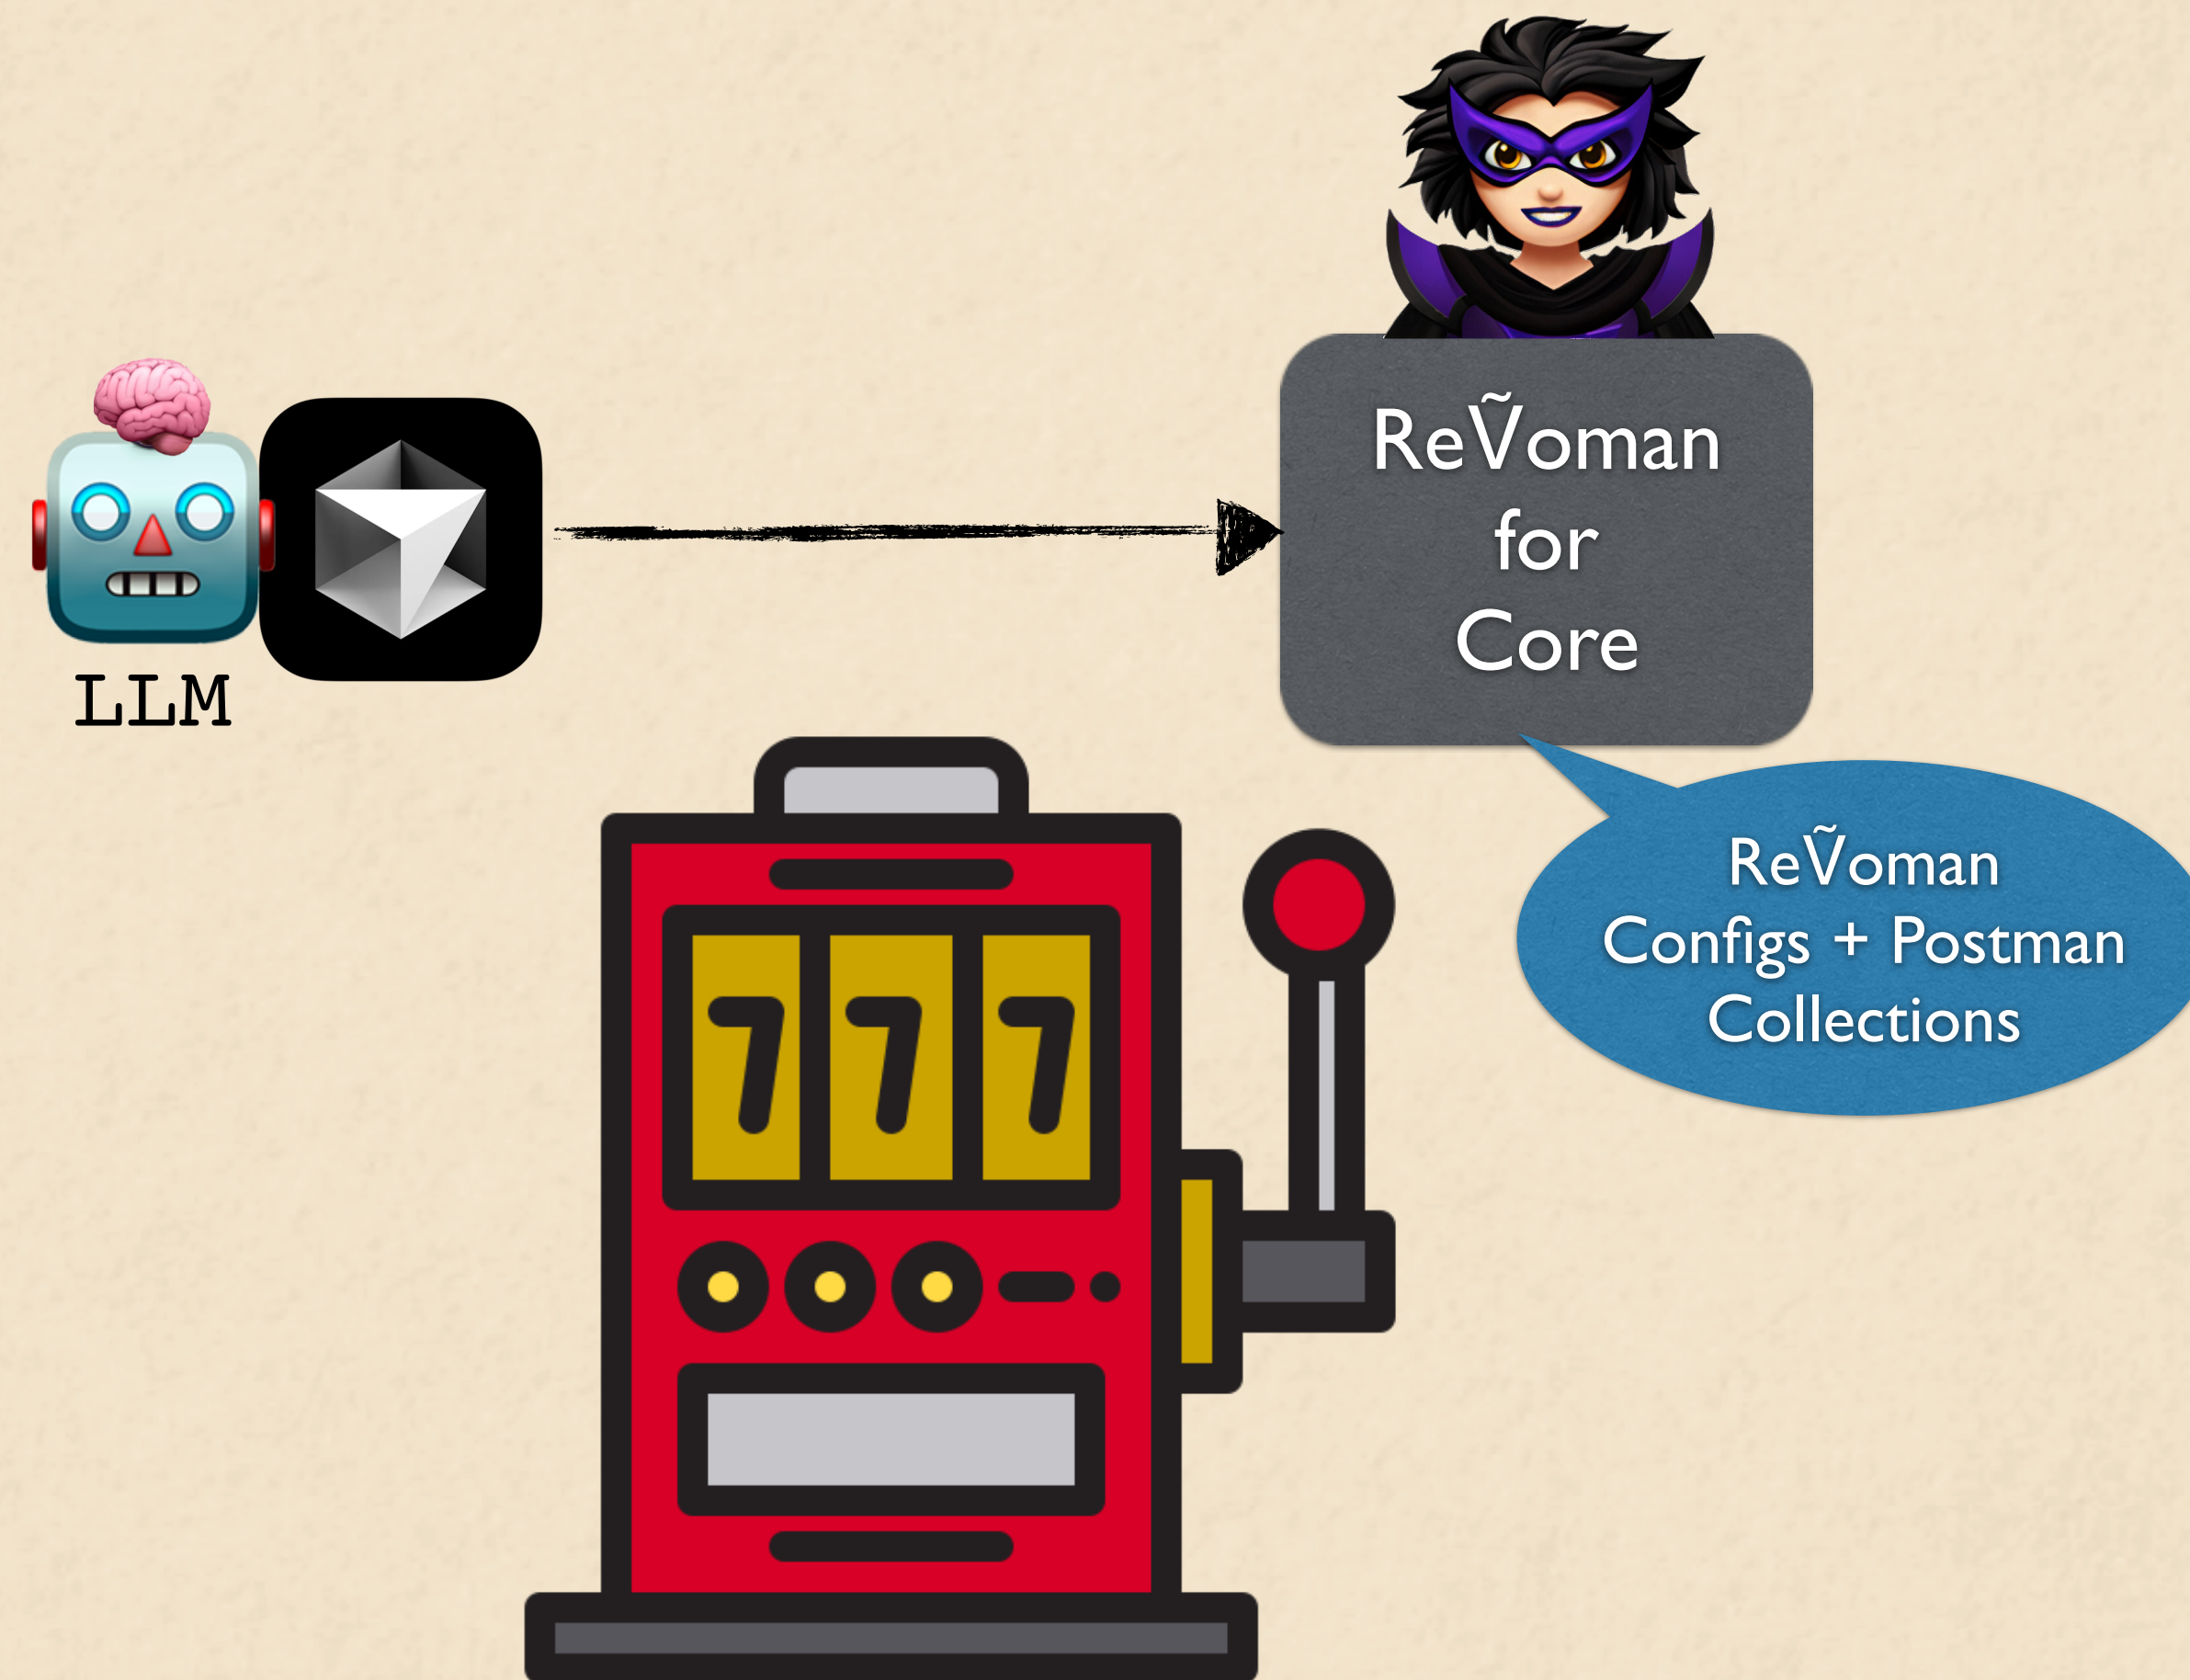

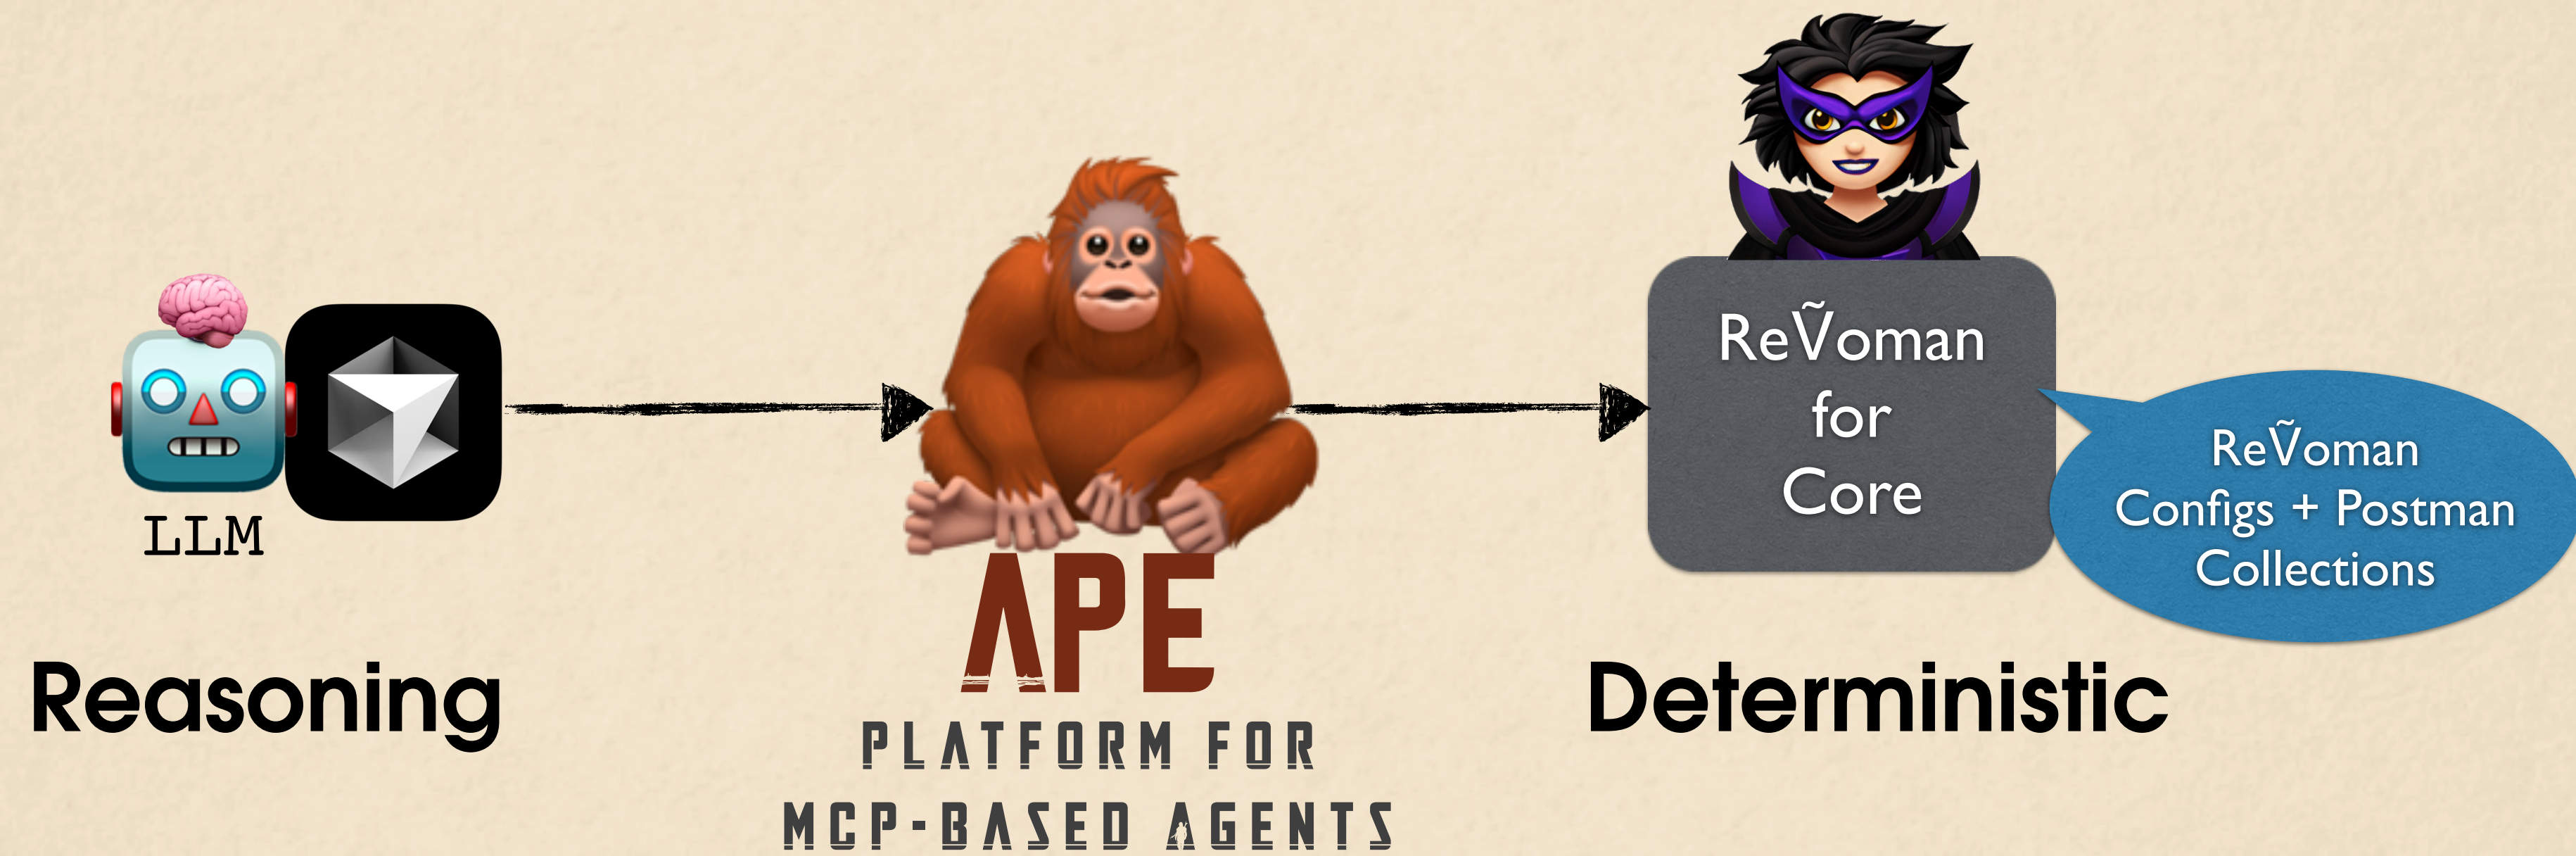

REVOMAN

[REV-WOMAN]

Adoption

- ~150 Ftests written using ReVoman in a single release
- Accumulated valuable API data and metadata via Postman collections and Configurations

salesforce

PCM + QOCAL + BILLING

APE
PLATFORM FOR
MCP-BASED AGENTS

What else does the Platform offer?

- Governs the Tool descriptions, arguments, and tool dependencies
- Provides infrastructure for building MCP Capabilities like Monorepo, State management, Automation, and troubleshooting tools
- SDKs and utils to operate on Postman collections
- The ReVoman engine

APE
PLATFORM FOR
MCP-BASED AGENTS

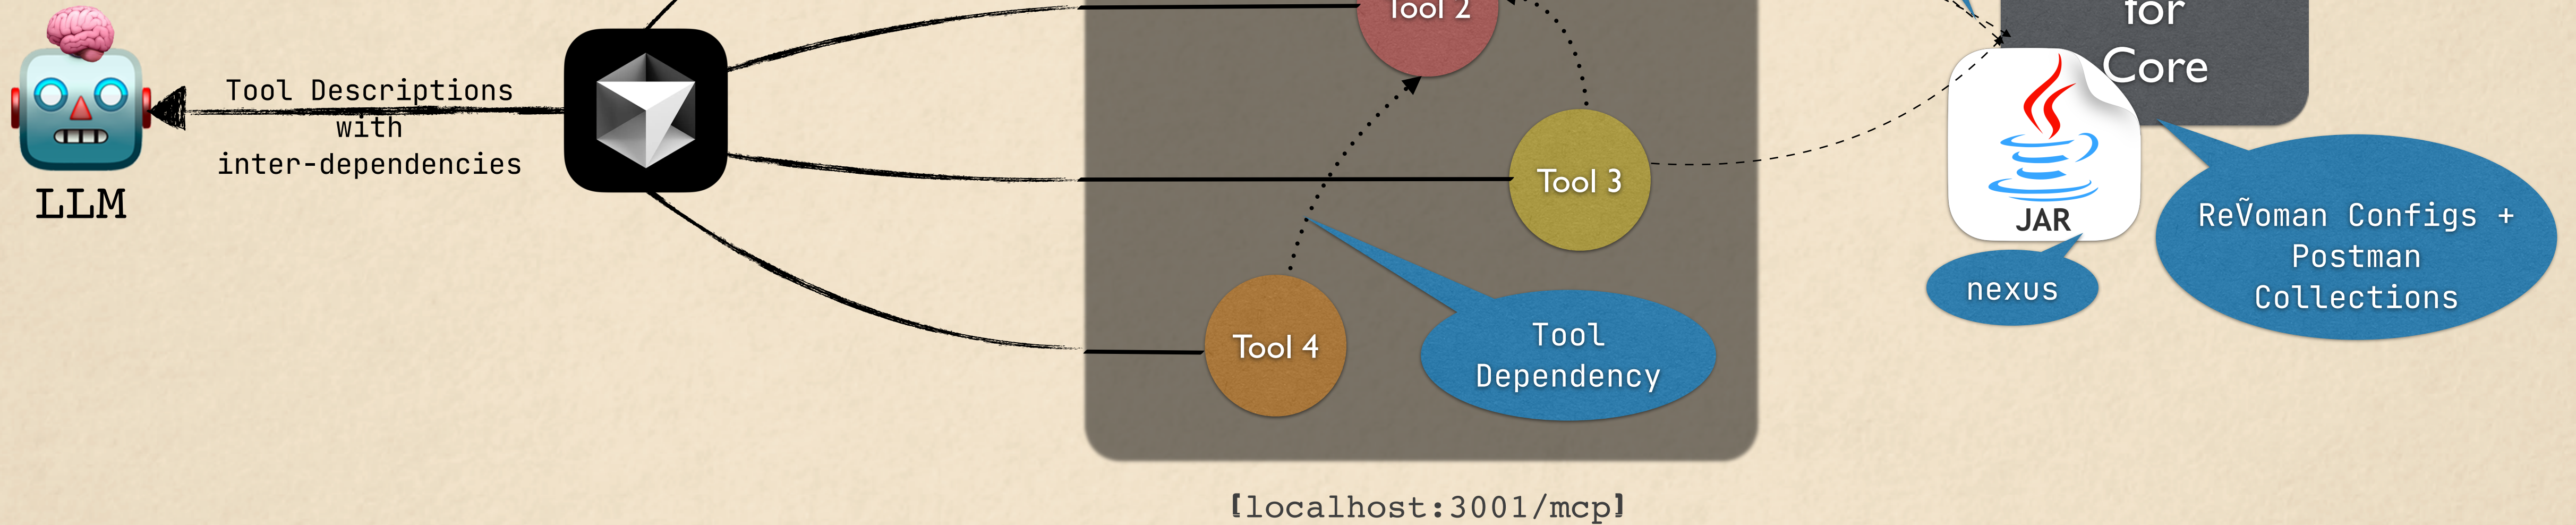

Low-Cost to a Team to Build and Maintain an MCP tool

- All the raw materials produced during the Q2 phase
- FTests and MCP Tools point to the same `revoman-on-core` repo

MCP-BASED AGENTS

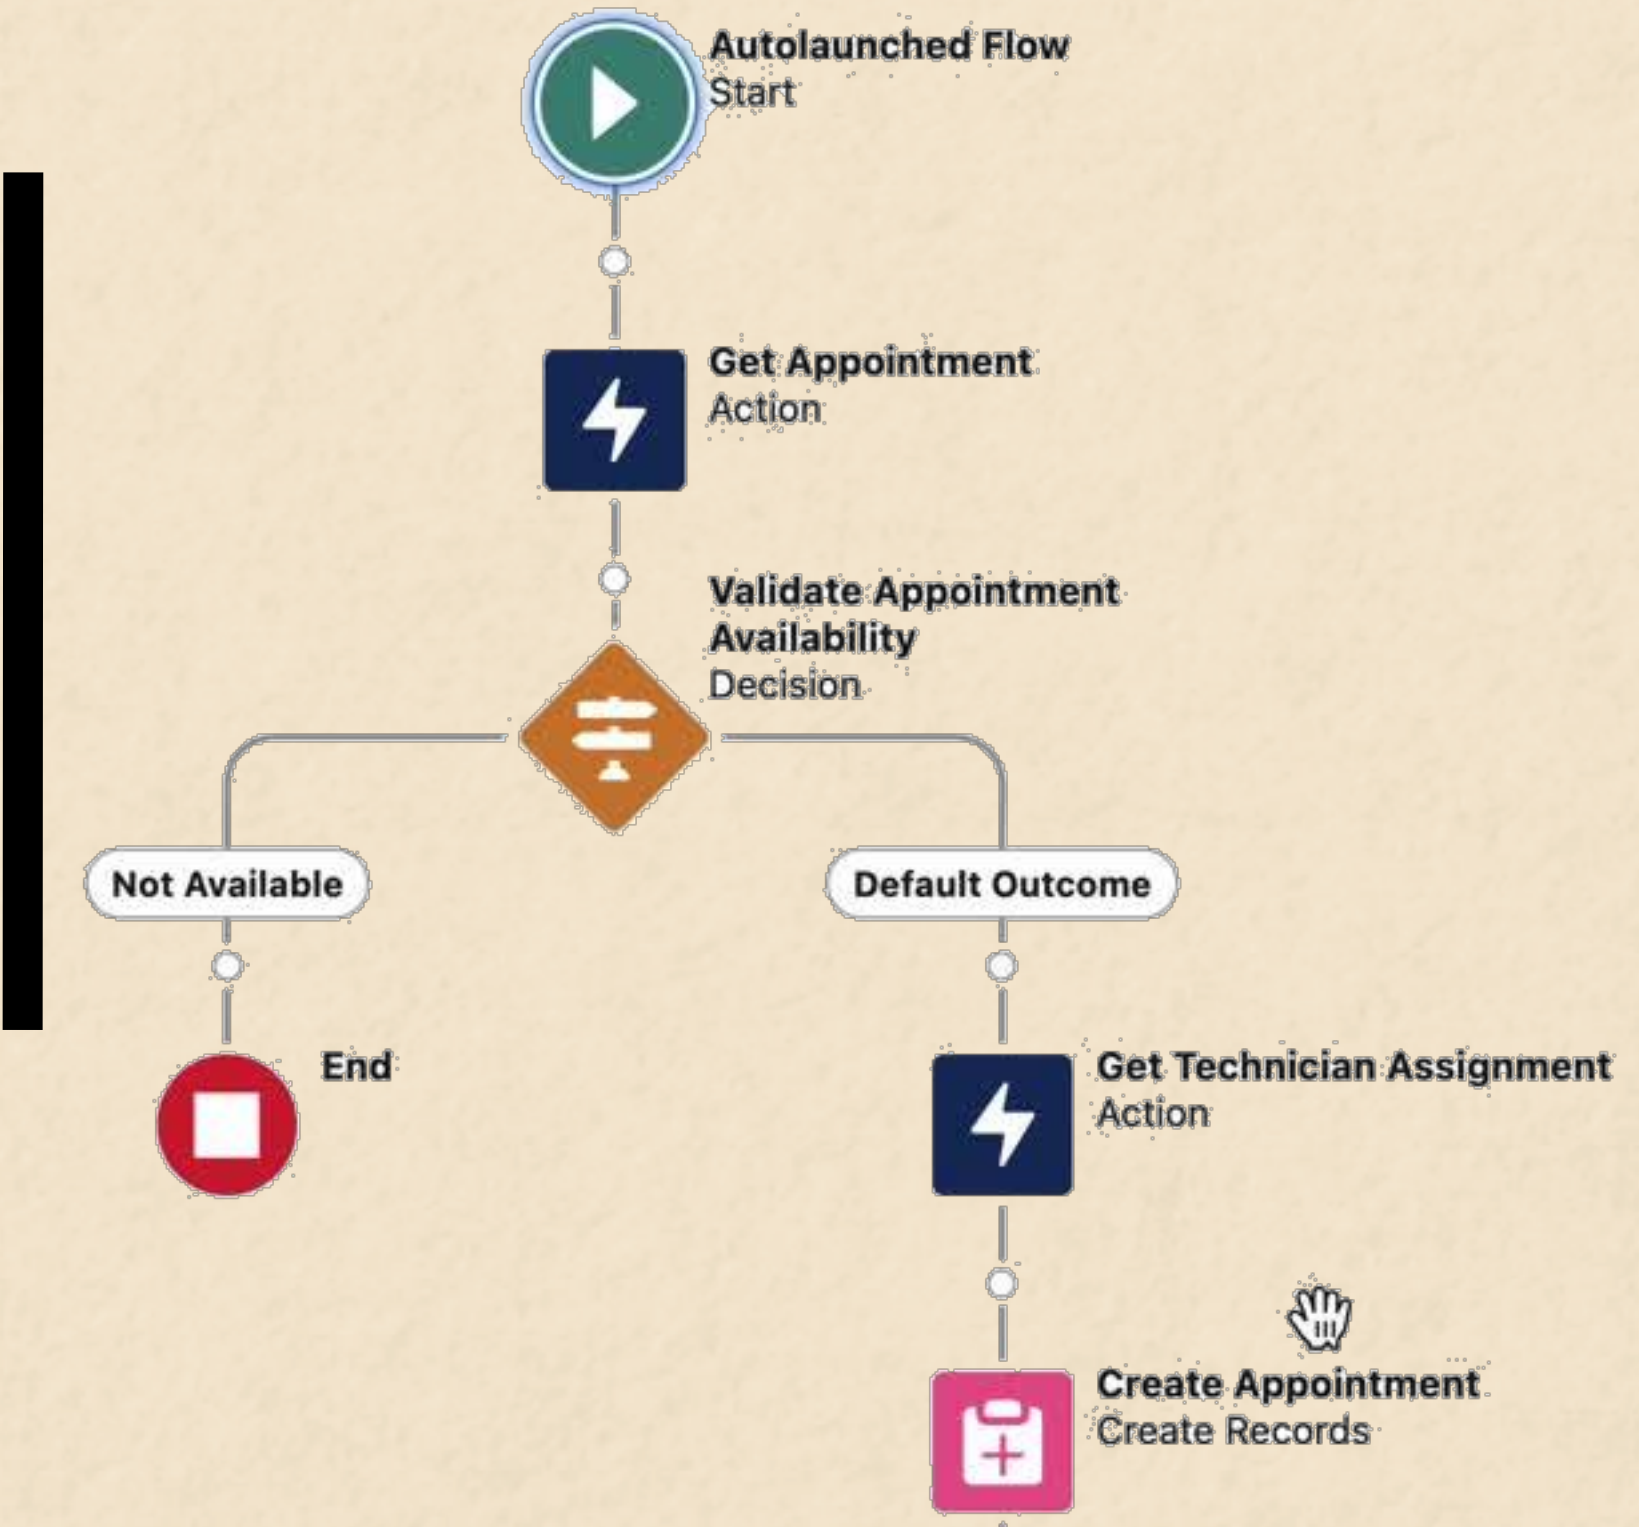

Applications & Use-cases

- Breaking down walls between product teams by hosting all Cloud APIs in Ape
- Detect Integration issues as and when
- Hub-and-spoke for all Domain knowledge
- Accelerate Q2 & Q3 process
- Customers experience upgrades from API-first to **Agent-first**

Ease of Implementation with Ape

Flow-Based
Agentforce Agents
vs
Ape  Agents

- > billing-setup-with-milestone
- > invoice
- > invoice-with-billingSchedule-recovery
- > order-to-billingSchedule
- > persona-creation
- > place-order
- > product-setup
- > tax-setup

- Extensibility with the drop of a Postman Collection
- Go Hybrid mode with custom Business logic
